

DEER FENCE

Deer...Majestic, beautiful, nature's creatures but voracious consumers of anything green and tasty in your garden or back yard. Aside from maintaining your beautiful landscaping, abating deer from your property prevents the spread of deer ticks to family members and serves a purpose to protect deer themselves. The standard, minimum height for deer fence is 7.5 feet as anything less is an easy hop-over for deer. Fencing comes in a variety of types of purpose driven mesh in galvanized steel, viny, near invisible PVC coated wire and pool code options.

PVC COATED HEX

is the traditional barrier and meets pool code
